Sub Category

Subject Timing of Data Distribution to the ISTs

Description of Problem or Suggestion:

What is the mechanism for providing planning and scheduling information to the ISTs? The concern is whether or not it is possible for the ISTs and the EOC to be using different sets of planning and scheduling information.

Originator's Recommendation

Ensure that ISTs and EOC are kept in synch with regards to usage of planning and scheduling information.

HAIS Response Date 1/24/95

All Planning and Scheduling information is maintained in a single storage area located at the EOC. The IST's access this information remotely. Whenever an update occurs to the centralized storage area, all users will be in synch.

If an instrument planner has checked out a portion of the plan for scheduling, all updates still take place in the centralized storage. Checking out a portion of the plan only modifies the permissions with regard to that part of the plan. This ensures that all FOT/IOT planners are in synch and up to date with the latest state of affairs.
